## WORK OF PROJECT MODEL

Each year, approximately 6,78,000 deaths are caused in the world due to unhealthy diet. A typical American diet is too high in calories, fat, sugars, sodium, etc. Hence, people have become more proactive when it comes to health matters. Services like eating habit recorder and calorie/nutrition calculator have become extremely popular. They can make users aware of problems like obesity, cancer, diabetes, heart-disease, etc. that can be caused by unhealthy diets. Most of these services require the users to manually select a food item from a hierarchical menu which is a time consuming process and not so user friendly.
